4.24 Behaviour of an oscillator network with ten nodes .............................. LCNetworkDemo5.eps
4.25 Comparison of the eigenvalues of the networks with path or with ring structure ................................................................. LCNetworkDemo6.eps
4.25 Comparison of the eigenvalues of the networks with path or with ring structure ................................................................. LCNetworkDemo7.eps
4.34 Root loci of the closed-loop agent and the extended closed-loop agent ................................................................. SyncIMPDemo10.eps
4.37 Command step response of the velocity control loop of ten vehicles with different mass ................................................................. SyncIMPDemo12.eps
4.39 Behaviour of the platoon with neighbouring couplings ................. SyncIMPDemo15.eps
4.41 Behaviour of a single Kuramoto oscillator with $\omega_1 = 1$, $\theta_{10} = 2$ and $u_i(t) = 0$ .............................................. SyncKuramotoDemo1.eps
4.42 Synchronisation of uniform Kuramoto oscillators with linear couplings ($\omega_i = 1$, $k = 0.03$) .............................................. SyncKuramotoDemo2.eps
4.43 Phase-locking behaviour of non-uniform Kuramoto oscillators ... SyncKuramotoDemo3.eps
4.47 Complete synchronisation of non-uniform Kuramoto oscillators ... SyncKuramotoDemo5.eps
4.48 Behaviour of uniform Kuramoto oscillators with non-synchronisable phases ................................................................. SyncKuramotoDemo8.eps
4.49 Behaviour of ten nonlinearly coupled non-uniform Kuramoto oscillators for two coupling strengths ................................................................. SyncKuramotoDemo7.eps
4.50 Evaluation of the synchrony of the network behaviours shown in Figs. 4.47 and 4.49 ................................................................. SyncKuramotoDemo9.eps
4.51 Relation between the coupling strength $k$ and the order parameter $r_\infty$, which has been numerically determined for non-uniform oscillators with eigenfrequencies $\omega_i \in [2, 4]$ and all-to-all couplings ................................................................. SyncKuramotoDemo10.eps
4.53 Equilibrium states ................................................................. SyncKuramotoDemo12.eps
4.53 Synchronisation behaviour of the uniform oscillators with $\theta_{10} = 0$ SyncKuramotoDemo11.eps
4.54 Phase-locking of three non-uniform Kuramoto oscillators with initial phases (4.185) ................................................................. SyncKuramotoDemo13.eps
4.55 Synchronisation of ten extended oscillators with nonlinear all-to-all couplings and coupling strength $k = 1.5$ (left) and $k = 0.2$ (right) ................................................................. SyncKuramotoDemo14.eps
4.55 Synchronisation of ten extended oscillators with nonlinear all-to-all couplings and coupling strength $k = 1.5$ (left) and $k = 0.2$ (right) ................................................................. SyncKuramotoDemo15.eps
4.56 Synchronisation of ten Kuramoto oscillators with nonlinear star couplings ................................................................. SyncKuramotoDemo16.eps
4.57 Outputs of four oscillators (detail of Fig. 4.56) ......................... SyncKuramotoDemo17.eps
4.58 Behaviour of van-der-Pol oscillators ...................................... SyncVanDerPol11.eps
5.4 Communication structure and behaviour of the forth agent  

5.14 Root locus and step response of the controlled robot  

5.14 Root locus and step response of the controlled robot  

5.15 Behaviour of the five robots with neighbouring couplings and with the communication graphs of Fig. 5.12  

5.15 Behaviour of the five robots with neighbouring couplings and with the communication graphs of Fig. 5.12  

5.20 Vehicle outputs $y_1(t), ..., y_4(t)$ for sinusoidal input (top) and for step input (bottom)  

5.21 Details of the step responses $y_i(t)$ of $N = 50$ vehicles  

5.22 Velocities and vehicle distances in a braking manoeuvre (left/bottom curve: $v_0, d_1$, far right/top curve: $v_4, d_1$) (left) and vehicle positions $s_i$ (right)  

5.22 Velocities and vehicle distances in a braking manoeuvre (left/bottom curve: $v_0, d_1$, far right/top curve: $v_4, d_1$) (left) and vehicle positions $s_i$ (right)  

5.23 Velocities and vehicle distances for changing command signal $v_{ref}(t)$ of the leader (dashed line)  

5.27 Platoon behaviour with ACC (velocities $v_0, ..., v_5$; distances $d_1, ..., d_5$)  

5.29 Velocities and distances (left) and positions (right) of the vehicles in a platoon with CACC  

5.29 Velocities and distances (left) and positions (right) of the vehicles in a platoon with CACC  

5.30 Impulse responses belonging to the transfer functions (5.108), ($i = 2, ..., 5$)  

5.31 Platoon behaviour with CACC (left) and ACC (right)  

5.31 Platoon behaviour with CACC (left) and ACC (right)  

5.32 Comparison of the velocity $v_2(t)$ of the second follower (third curve from above) for CACC (top) and ACC (bottom)  

5.34 Impulse response and vehicle distance in a braking manoeuvre  

5.36 Impulse responses of the controlled vehicles ($\dot{y} - , \ddot{f} - -$)  

5.37 Impulse responses of the controlled vehicle for proportional distance controller  

5.38 Vehicle distances in a platoon with distance controllers  

6.3 Characteristic path length of the undirected path-graph
